Alaa Abdullah Tawfik

- **Inner supervisor of the project:**

- Dr/ Eng. Samey El mokadem

- **Outer supervisor of the project:**

Dr. Abdel Rahman Al Akhdar

Problem Statement

- Each antibiotic can be used to treat more than one type of bacteria, and the doses of antibiotics required to treat a patient vary. These doses vary according to the patient's age, gender, health condition and other factors. Therefore, it is necessary to have a system followed in the consumption of antibiotics that aims to rationalize the consumption of antibiotics in their places of distribution, whether hospitals, clinics or pharmacies.

Project Objectives

- The project aims to build a system that helps rationalize the consumption of antibiotics. The best way to rationalize consumption is to monitor the number of patients, the types of diseases they have, and the doses required for the treatment process.
- Objectives: -
 - - **Detecting if an antibiotic is being consumed inappropriately**
 - - **Setting appropriate dosage instructions for each patient, according to the case, during the patient registration process**
 - - **Monitoring and extracting patients' statistics at the hospital**
 - - **Monitoring and extracting statistics of antibiotic consumption in the hospital**

Some Example Of System Work

A mockup of a login form on a grey background. The form is a white rectangle with a light grey header bar containing the word "Login". Below the header, there are two input fields: "Username" with the text "admin" and "Password" with masked characters "••••••". Below the password field is a checkbox labeled "Remember Me". At the bottom of the form is a blue button with the text "Login".
